

COMBINING SUBJECTS

By Femke, Ollie, Bridie, Oona, Morgan and Tess

Daily students go to school dreading the day ahead. Dreading the boring and plain subjects. These subjects include: maths, reading, writing, science and technology. This happens over and over, you are stuck in a cycle of boredom. Believe us we know, personally I think school is regular there is nothing incredible happening. I can tell our fellow students also feel the same. But, that can change. With our innovative and forward thinking idea you can make school a enjoyable place. Merging Subjects. If you take our idea and implicate in in your classrooms/school students will enjoy learning! When they wake up they will be excited and happy about the new day. When merged, subjects become more interesting. An example of Merging subjects in the Wairarapa is Kuranui College. Kuranui has a programme called “the Ignite programme”. It is a cross curricular idea and can engross students with a wide range of topics.

Reasons we should combine subjects

If we combine subjects like cooking and maths it might make students love maths (or the subjects that they do) because they get to cook for maths

It can better their education and make them want to learn even more

Like how we already do comprehension which is combining reading and writing

Students will be able to learn different subjects in ways they never have before

Learning something new through something they are good at

Subjects We Could Combine

MATHS - Cooking, Building, Sports (Skating, 360 Degrees Board Flip), Graphic Design

ENGLISH - Gaming, Sports, Film, Lyrics, Theatre/Drama, Coding

SCIENCE - Forensics, Bio, Hunting, Tramping, Agriculture

PE - Health, Tramping, Sport

STEAM - Architecture/Design, Tattoo Art, Ancient Warfare, Pottery, Coding

LANGUAGES-Reading, Writing ,Coding

Students will want to learn if they get something out of it and have fun.

There are 8 learning areas (or subject areas) in The New Zealand Curriculum:

- English.
- the arts.
- health and physical education.
- learning languages.
- mathematics and statistics.
- science.
- social sciences.
- technology.

What we want from the principals?

To possibly consider...

- Pilot Programme
- Taster of the subjects
- A couple a days (or just one day) a week of Merged Learning

Thank You for listening and considering our ideas. Now is there any questions?
